

ClearUp BIO Application

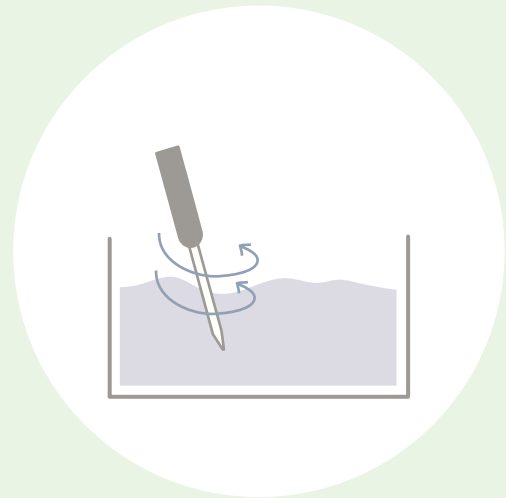

For all applications it is important to ensure that ClearUp BIO is well suspended and well distributed in the wine.

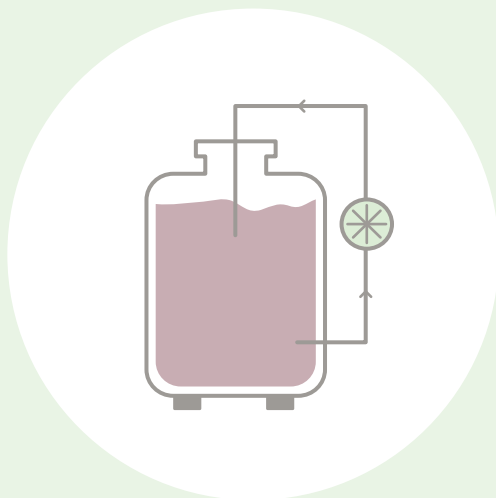

STEP 1

Add ClearUp BIO to wine/juice (>20°C).

STEP 2

Stir well until you have a homogenous suspension without any solids.

STEP 3

Add to tank and mix well.

STEP 4

Allow contact time of up to 48hrs depending on application and then remove ClearUp BIO by racking or filtration (do not use a centrifuge).

Note: For addition to increase internal surface (NTU), please follow steps 1 to 3 only, then rack as usual following fermentation.
